

Learn More About Substation & Transmission Reliability Enhancements Proposed In Your Area

Atlantic City Electric is taking steps to modernize the local power grid and provide continued reliable service in your area. The company plans to install new equipment at the existing Tansboro substation at Williamstown/New Freedom Road & Grove Street in Winslow Township, and upgrade the existing transmission line, along Williamstown/New Freedom to Williamstown Road and continues into Monroe township on Sicklerville Road to Clayton Road.

Atlantic City Electric will conduct two public information sessions to help residents learn more about the project and provide Atlantic City Electric opportunity to obtain feedback from our customers. Our representatives will be on hand for one-on-one discussions of the project scope, substation plans, transmission routes, pole style and answer your questions.

This is an informational event presented by Atlantic City Electric and is an opportunity for residents to learn about the full scope of the project.

To learn more, please contact
